

RUSS GALLIVAN

Connected business systems, field software and AI training for owner-led contractors.

rgallivan7@gmail.com (720) 628-3119 russgallivan.com Colorado • on site or remote English & Spanish

SUMMARY

I've run crews. Now I map how work moves through owner-led contractors, connect the systems so a record is entered once, and give the owner one view of what's late. I build the tools your company runs on, or I train your team to use them, in English and Spanish, with a person signing off.

CORE CAPABILITIES

Connected business systems

One sign-in for 11 of 11 tools, records entered once and counted when they land, and an owner's morning view fed by 7 systems every 5 minutes.

Field operations software

Five apps live: hub, timesheets, daily log, equipment and hazard analyses. Built to hold up on a phone in the sun, with gloves on, in a dead zone.

Applied AI with guardrails

Eight AI systems, each with its limits written into the code: cited sources, spend caps and named reviewers. Approvals, pricing, safety and people decisions stay human.

Training and curriculum

606 modules and lessons across ten programs, from high school classrooms to lift director, with 20,000+ narrated clips in English and Spanish.

Workforce pathways

Knowledge, practice, independent verification and the employer's call kept as four separate records.

Crane, rigging and lift planning

3D lift planning that stops until inputs are confirmed, and a crane-inspection app with 55 forms and 4,167 questions.

PAST PERFORMANCE

MY COMPANY • MSC SAFETY SOLUTIONS

15 apps run daily operations for my safety-services company and a crane school.

25,782 events delivered between systems with 0 mismatched, **11 of 11** tools on one sign-in, and CRM lookups cut from over 8 seconds to **446 ms**.

CRITICAL LIFTS • MANUFACTURING CLIENT

Ten real lift plans, **139 pages**, rebuilt into ordered field checklists. **678** numbers carried over with none missing, and **42** places found where a plan disagreed with itself. Review support, not engineering approval.

LEADERSHIP COACHING PLATFORM • LIVE

48 weekly lessons across four 12-week tracks, foreman to owner. AI drafts the coaching debriefs, and crisis or safety reports never go to the AI.

8

AI systems with their limits in code

606

training modules and lessons

WAYS TO START

Fit call	Free
AI workshop for your team	Half day
Systems assessment	10 business days
Workflow pilot	About 4 weeks
AI pilot with guardrails	One workflow

HOW I WORK

- 01 Embed** beside the owner, office and crew.
- 02 Map** every system and handoff on one page.
- 03 Build & prove** one complete workflow.
- 04 Hand over** code, guides and a named owner.

Drafts survive a dead zone.

Finished records lock.

Each company sees only its own data.

The limit is not the model. The limit is the imagination.
